Schematic

When Skip mode is selected, AC Loop simulation may fail if the Load Current is low enough to engage Skip mode, because Skip mode is hysteretic and there is no AC Loop to measure.

The following features described in the data sheet have not been modeled:

1. A mode for Maximum Duty Cycle Operation which is engaged when V_{out} is within a few percent of V_{in} .
2. Spread Spectrum - The model will always operate with Spread Spectrum turned off, regardless of whether the SPS pin is pulled high or low. Even though Spread Spectrum is not modeled in EE-Sim, different parts are available with and without spread spectrum options. Please refer datasheet.
