

Initial Design

1.0

Design Requirements

| Parameter | Value |
|-------------------------------|--------------|
| Input Sources | Single Input |
| Minimum Input Voltage | 4.5V |
| Maximum Input Voltage | 5.5V |
| Nominal Input Voltage | 5V |
| Input Steady-State Ripple | 2% |
| VCC Input | 5V |
| Output Voltage | 1.2V |
| Output Voltage Over/Ubershoot | 6% |
| Output Current | 6A |
| BOM Priority | Cost |
| Ambient Temperature | 25°C |

Schematic

******* Notes *******

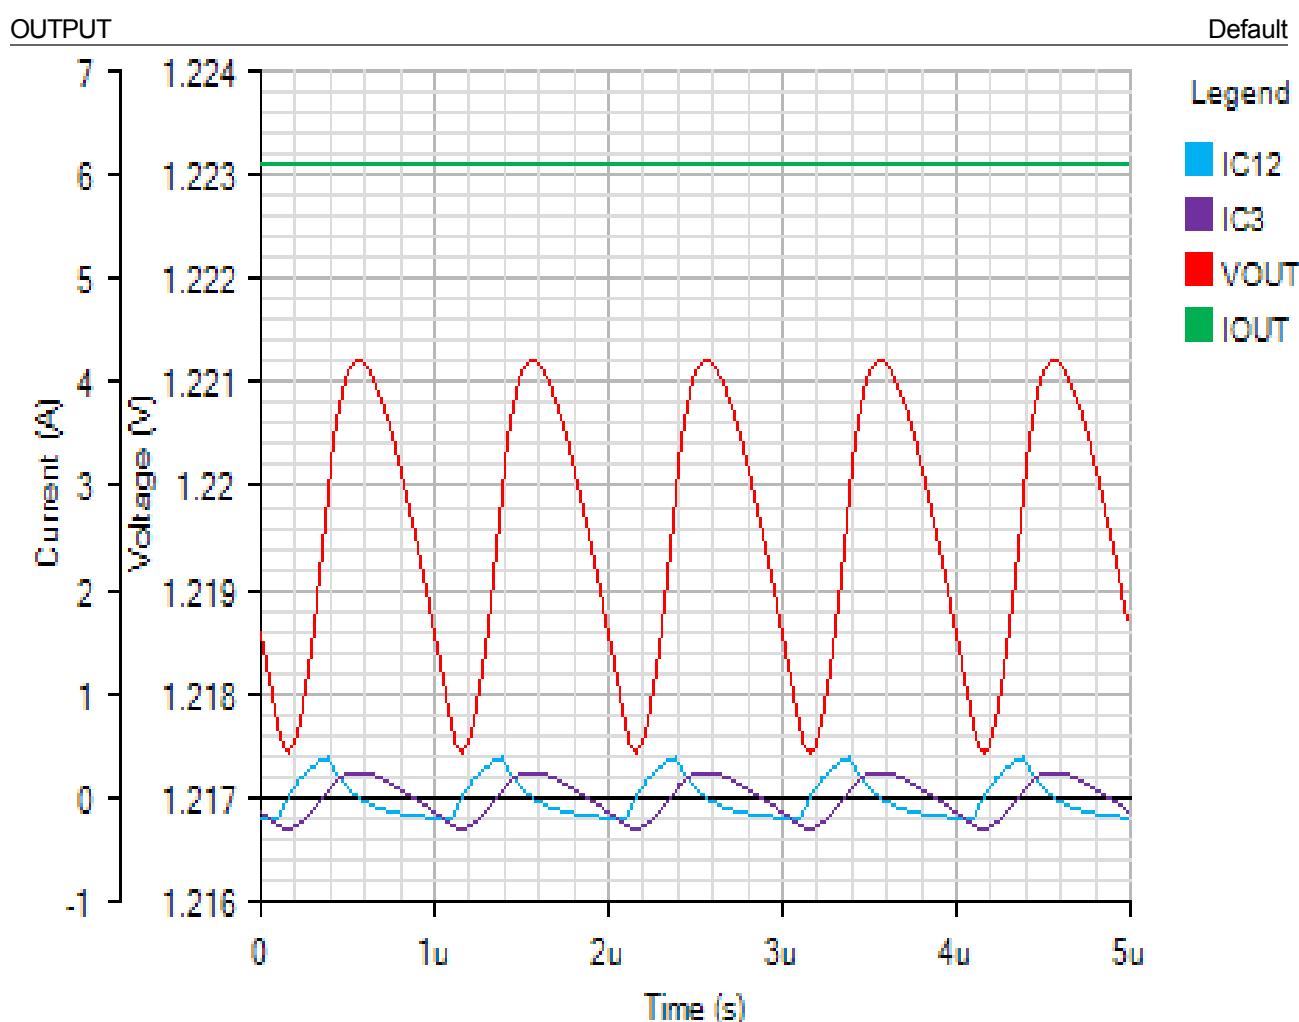

- Decreasing the output capacitance below recommended value might degrade the transient response or loop stability.
- If the current level (starting current for Load Steps) is below 1.5A, AC, Steady State and Load Step analyses may fail due to switch over in PFM mode.
